

Agilent E7495B Base Station Test Set

Technical Overview

Comprehensive base station test:

- Wireless direct connect measurements
- Over-air test measurements
- Backhaul measurements

Multiple wireless system testing:

- cdmaOne and cdma2000
- GSM, TDMA and analog systems
- W-CDMA (UMTS)

Technicians no longer need to carry armfuls of tools when they perform base station maintenance. All they need is one tool from Agilent Technologies. The Agilent E7495B base station test set:

- Performs all standard BTS and over-air measurements with the precision you need – more BTS wireless and wireline measurements than any other test set on the market.
- Increases each technician's productivity, decreasing time spent per cell site visit.
- Minimizes the need for training because of its simple interface, simple procedures, and built-in measurement help.
- Stands up to rough field use and all weather conditions.
- · Costs much less than all the tools it replaces.

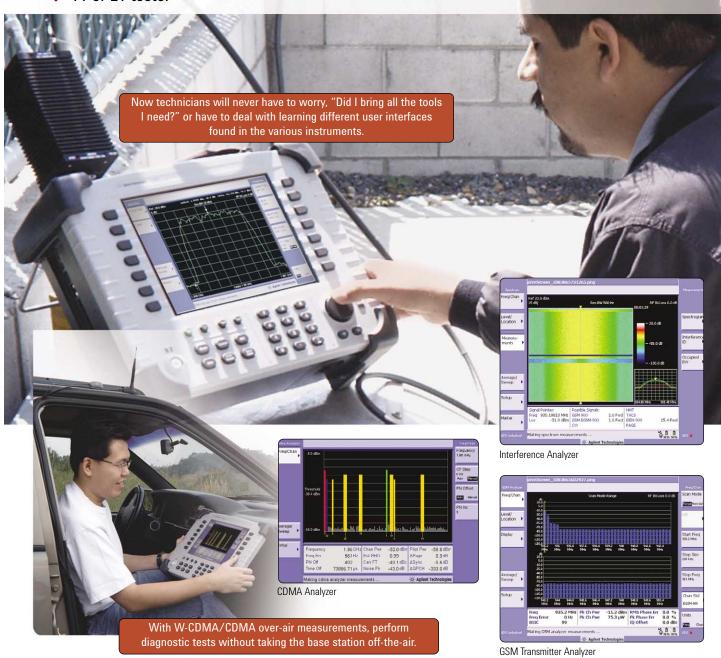

Agilent E7495B Base Station Test Set

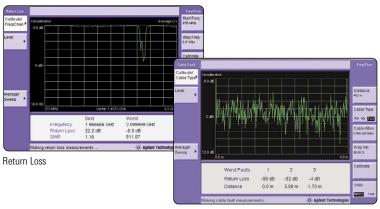

Comprehensive Base Station Test:

- ✓ Power meter
- CW and cdmaOne/cdma2000 reverse link signal generator
- ✓ W-CDMA/cdmaOne/cdma2000 over-air test tool
- ✓ Antenna tester/cable fault analyzer
- ✓ Spectrum analyzer
- √ T1 or E1 tester

- ✓ TX RF tests for cdmaOne/cdma2000/ W-CDMA (UMTS)/TDMA/GSM/EDGE/ GPRS/AMPS/iDEN
- ✓ TX RF modulation analysis for cdmaOne/ cdma2000/W-CDMA (UMTS)/GSM
- ✓ Internal GPS receiver

Leverage Your Technicians' Time, Improve Your Quality of Service

Cable Loss

Test/Capability	Test/	'Capal	bility
-----------------	-------	--------	--------

Power meter

Technician Benefit

Replaces the need to carry a separate power meter, simplifying maintenance and shortening site visits. Additionally, using an appropriate power sensor enables technicians to make power measurements of microwave links.

Accurate power settings help networks operate in full capacity - reducing coverage holes and minimizing the effects of interference.

CW and cdmaOne/cdma2000 reverse link signal generator

Provides the technician with a source to conduct RSSI or sensitivity measurements. Additionally, allows a technician to perform component level characterization utilizing simultaneous spectrum analysis and built-in RF and CDMA sources.

Reverse link testing helps to ensure network service quality.

W-CDMA/cdmaOne/cdma2000 over-air test tool

Provides fast measurements in less than five minutes. Enables time for proactive maintenance and makes pole top testing practical.

Problem areas can be identified without interrupting service.

Antenna tester with vector network analysis capability

• cable tests • swept insertion

· swept gain · distance to fault

Lets your technicians evaluate one of the primary BTS trouble spots in a matter of minutes. Dual port insertion loss allows technicians to sweep various components like filters, duplexers, amps and more. A healthy antenna and feed line network yields improved voice quality, better system reliability and reduced dropped calls.

Spectrum analyzer

Provides necessary functionality so your technicians don't need to carry a separate spectrum analyzer. Built-in masks and markers make it easy to use. Industry leading low noise figure receiver is capable of measuring down to -150 dBm, allowing technicians to identify and pull out low level, intermittent rogue interferers.

Quick interference detection leads to improved quality of service.

T1 or E1

Identifies and diagnoses T1 or E1 problems. Dual channel capability allows "loop-back" measurements. Fewer wireline problems mean reduced service problems and down time.

Channel scanner for cdmaOne/ cdma2000/W-CDMA(UMTS)/TDMA/ GSM/EDGE/GPRS/AMPS/iDEN

Provides easy to interpret bar graph display illustrating channel power versus frequency of user defined channels.

The channel scanner quickly identifies improper power levels that can adversely affect network performance.

Internal GPS receiver

Provides position location, highly accurate frequency measurements and enables independent verification of base station GPS receiver timing.

For CDMA networks, the internal GPS receiver helps reduce dropped calls by identifying the "island cell" effect - improving the quality of service.

Interference analysis

Allows engineers and technicians to find intermittent, interfering signals using a spectrogram display, signal strength meter and signal ID capability.

Eliminating interfering signals from the network improves quality of service.

Dramatically Increase Technician Productivity and Maintain High Quality of Service

The Agilent E7495B is the **most functional one-box tool** on the market, eliminating the need for your technicians to carry, manage and learn multiple test tools.

This helps reduce your asset costs, tracking costs, calibration and maintenance costs, and the training costs associated with learning the specifics of separate instruments.

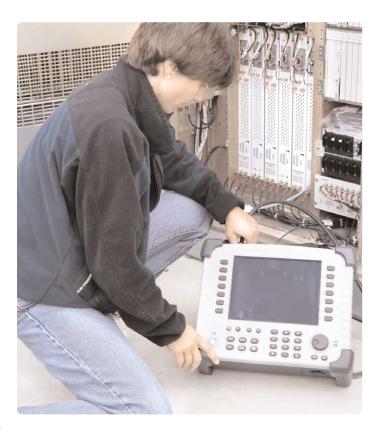

The E7495B has a **remarkably short learning curve** because of its simple interface and accessible learning tools. So your engineers and technicians – even those with limited knowledge or experience – will be performing BTS measurements in less time. In turn, experienced engineers can devote more of their time resolving chronic coverage problems, planning new sites, and expanding into new services and technologies.

The simple procedures plus exceptionally usable hardware combine to produce **shorter net time per cell site visit**. Now each technician can handle more cell sites and have the time to conduct more proactive maintenance.

The field-rugged design means less downtime, more field time.

Engineered-in **extensibility** lets you do more today and tomorrow. Today, a variety of I/O ports permit data sharing with other tools and software. In the future, all feature upgrades will be done through hardware or firmware inside the case, preserving the single-case convenience and reliability.

Having the most frequently used BTS tools in one box dramatically increases your technicians' productivity.

Agilent Puts the Emphasis on Usability

The Agilent base station test set is so easy to use, it minimizes the need for training. Technicians will get up to speed fast – and get their work done quickly every day.

The intuitive hardkey/softkey interface, used for all measurements, means there's less of a learning curve.

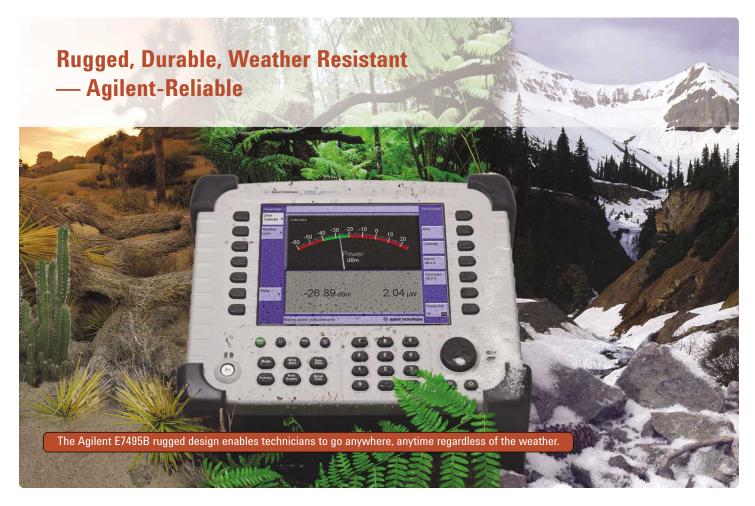

The built-in measurement help leads technicians through each measurement task step-by-step. Other learning tools include a user's guide and an optional web-based tutorial.

Backlit hardkeys, protected by a water-resistant rubber membrane, make it easy to perform tests under all lighting and weather conditions. A **transflective color display** stays viewable even in direct sunlight and at wide viewing angles. Result: faster, more accurate readings.

Technicians can hand-carry the lightweight unit or use the ergonomically designed backpack to free up their hands. The backpack includes a comfort-contoured back panel, full padded hipbelt, plus extra pockets and tool loops for other hardware and supplies.

Snap-in battery packs provide up to three hours of performance. You can switch batteries in seconds.

Snap-in battery pack allows technicians to go to remote sites without the hassle of restrictive power cords.

A single-box measurement solution makes sense only if it can stand up to rough field use and unexpected weather. So we designed the Agilent base station test set to be rugged, durable and weather resistant.

A magnesium alloy case with extensive internal RF shielding protects the components, reduces interference that could impact measurement accuracy, and makes the test set easy to handle and carry.

Gasketed ports, water-resistant rubber membrane, and dust-proof case design (no fan, no vents) add to the ongoing confidence you can have in the measurements. The backpack protects the unit on the way to and from the site. A built-in rain flap provides additional protection.

We know that you'll want to add new capabilities as your network evolves. So we made sure that all functionality upgrades will be implemented through firmware or hardware inside the case. The Agilent test set grows in functionality without growing in size. The field-rugged design is never compromised by awkward external modules.

Features and Benefits Summary

Multiple tools

Power meter	Helps ensure accurate power settings, so you can maximize network capacity while minimizing coverage problems.
Fast cdmaOne/cdma2000 over-air measurements	Provides first level diagnostics in less than five minutes without taking the base station off the air or leaving the vehicle. Enables time for proactive maintenance and makes pole top testing practical and convenient.
CW and W-CDMA/cdma0ne/cdma2000 reverse link signal generator	Helps examine the reverse link of the network.
Reliable antenna measurements with vector network analysis capability and DC bias • cable tests • swept insertion • swept gain • distance to fault	Quickly identifies antenna feedline and connector problems to provide a full picture of antenna health. The DC bias option eliminates the need for external power sources to power pole-top amplifiers.
Full function dual port, T1 or E1 tests	Reduces the amount of time needed to identify if problems are on the wireline or wireless side.
Spectrum analyzer	Enables quick identification of various signals.
Channel scanner for cdma0ne/cdma2000 W-CDMA(UMTS)/TDMA/GSM/ GPRS/AMPS/iDEN	Measures power, frequency and bandwidth for multiple wireless systems.
TX RF modulation analysis for cdma0ne/cdma2000/W-CDMA (UMTS)/GSM	Increases your technicians' TX knowledge in real-time. For example, the CDMA test suite adds extensive transmitter analysis for both cdma0ne and cdma2000 (1x RC1-RC5). This CDMA option includes code domain power, time offset, tau, rho, and carrier feedthrough. For W-CDMA the tests include code domain power, error vector magnitude plus additional modulation quality metrics. GSM metrics include frequency error BSIC decode peak channel power, phase error and IQ offset.
Built-in GPS receiver	Provides position location, highly accurate frequency measurements and enables independent verification of base station GPS receiver timing.
Interference analyzer	Allows engineers and technicians to locate and identify intermittent, interfering signals that cause dropped calls and negatively influence quality of service.

Ease-of-use

Transflective color display	Speeds up measurement readings because the display remains viewable in darkness, shade and direct sunlight.
Single hardkey user interface	Provides easy navigation to perform quick and accurate measurements — even with gloves on.
Backlit keys	Makes it easier to perform tests under all lighting and weather conditions.
Built-in measurement help	Provides step-by-step instructions for measurements.

See Specification section for more information.

Features and Benefits Summary *continued*

Portability

Custom backpack (optional)	Protects the test set on the way to and from the site — and enables technicians to be hands-free to easily enter site.
Padded shoulder strap	Provides another convenient way to carry the unit.
Stainless steel stand	Props up the test set for better visibility.
Approximately 20 pounds	Easy to carry and move around in confined spaces — no additional modules or tools.
Battery life – up to three hours with two batteries	Allows extended measurement sessions without a restrictive power cord.

Rugged design

Magnesium alloy case	Provides a lightweight yet strong enclosure; enhances heat distribution and RF shielding.
Water-resistant rubber membrane key pad and sealed display	Enables technicians to go anywhere, anytime — regardless of the weather. Seals out water and dirt to help ensure measurement performance.
Dust-free case design (no vents or fan)	Keeps the unit free of moisture and dirt.
Gasketed ports	Protects components from moisture and harsh weather.
Wide operating temperature range –10 to 50 °C/14 to 122 °F	Performs well even in extreme cold and hot conditions.
Internal RF shielding	Reduces RF interference that could impact measurement results.
Rubber bumpers	Protects the unit while in rugged field environments.

Extensible

Flexible architecture	Easily upgradeable to meet future network needs without growing in size.
Remote monitoring	Allows technicians to remotely monitor problematic base stations from the comfort of their own desk.
Upgradeable	Upgradeable as formats evolve.
Linux operating system	Provides a stable and efficient operation system.
Compact Flash and PCMCIA card slot LAN connection	Makes saving and transferring measurement results to your PC or network quick and easy. Enables data to be easily captured and transmitted to your network.
USB connectors and RS-232	Allows easy hook-up for data transfers and I/O applications like printers, keyboards and mice.
File export	Allows you to easily save data to Excel files and images to PNG files for use with a PC.

E7495B Base Station Test Set Specifications

Specifications describe the instrument's warranted performance and are valid over the entire operating/environmental range unless otherwise noted.

Supplemental characteristics are intended to provide additional information useful in applying the instrument by giving typical, but non-warranted performance parameters. These characteristics are shown in italics or labeled as "typical," "usable to," or "nominal."

General specifications

Unless otherwise noted the following specifications apply to all measurements/tools using **port 2**.

Frequency accuracy:

Using internal time base: $\leq \pm 1$ ppm with > 15 minute warm-up

Internal time base aging: \pm 1 ppm aging/year

With GPS lock for > 15 minutes: $\le \pm 0.03$ ppm

Input frequency range:

10 MHz to 2700 MHz

Usable to 500 KHz (specifications and typical values do not apply below

375 MHz unless otherwise noted)

Maximum input level: +20 dBm (.1 W), +50 dBm w/supplied attenuator

Maximum input power without

damaging instrument: 100 W (without external attenuator)

Frequency and time reference:

Can use internal timebase or external signal:

GPS (external antenna supplied)

Even second; pulse

 $\begin{array}{lll} 1 \text{ MHz} & \geq 0 \text{ dBm} \\ 2.048 \text{ MHz} & \geq 0 \text{ dBm} \\ 4.95 \text{ MHz} & \geq 0 \text{ dBm} \\ 10.0000 \text{ MHz} & \geq 0 \text{ dBm} \\ 13.0 \text{ MHz} & \geq 0 \text{ dBm} \\ 15.0 \text{ MHz} & \geq 0 \text{ dBm} \\ 19.6608 \text{ MHz} & \geq 0 \text{ dBm} \end{array}$

Display:

Scale 1 to 20 dB/div. settable in 1 dB increments

Number of points 256 Number of divisions 10

40 dB attenuator:

Frequency range: 10 to 2500 MHz Attenuation accuracy: \pm 0.5 dB Max power: 50 dBm (100 W)

Spectrum analyzer/tools

Input frequency range: 10 MHz to 2700 MHz (*usable to 500 KHz*)

Reference level range: -150 to +100 dBm

Dynamic range: +50 dBm to -150 dBm

(with supplied 40 dB attenuator) (30 Hz RBW)

Input attenuation: 0 to 30 dB automatically selected,

10 dB controllable manually

Amplitude accuracy: ± 1 dB (100 to 2500 MHz at 25 °C)

Resolution bandwidth: 10 Hz to 1 MHz, settable to 1 Hz precision

Span: 1 KHz to 2.6995 GHz

Trace update:

Span: 2.49 GHz = 5.1 sec 60 MHz = 400 mS 1 MHz. 100 Hz RBW 1.2 sec

Simultaneous dynamic range: > 90 dB (CW signals at 300 KHz separation,

span 500 KHz, 30 Hz RBW

SSB phase noise: $\leq -85 \, dBc \, (30k \, Hz \, offset)$

Spurious responses:

Range control set to auto, high sensitivity mode

Internally generated, 50 ohm

load on input: <-115~dBmCrossing spurs : $\le-50~dBc$

Displayed average noise level: -150 dBm (30 Hz RBW, 375 MHz to 1.5 GHz)

Port 2 VSWR: < 2:1

Antenna/cable¹

Frequency range: 375 to 2500 MHz Frequency resolution: < 500 Hz

Immunity to interfering signals: +20 dBm (with interference rejection turned on)

Measurement speed:

Full span: < 17 mS60 MHz span < 7 mS

Return loss (port1)

With ≥ 16 averages: 375 to 2200 MHz

 Range:
 > 40 dB

 VSWR:
 < 1.02</td>

 Resolution:
 0.1 dB

 Display range:
 -5 to +150 dB

 SWR range:
 1 to 500

Distance to fault (port1)

Range (m): 1 m to 300 m

Resolution: $(1.5 \times 10^8) (Vf)/(f2-f1)$ Hz where VF is relative

propagation velocity of cable. (typically 1% of

measurement distance)

VSWR: 1 to 500

Insertion loss (port 1 to port 2)

Measurement uses supplied 10 dB pads

Usable range: > 100 dB wide range mode

Accuracy: $\pm 1 \text{ dB (over 0 to 60 dB, } \geq 16 \text{ averages)}$

Average insertion loss (readout) accuracy:
Range: 0 to 40 dB

Frequency: 824 to 960 MHz, 1710 to 2170 MHz

(mobile phone bands)

Readout resoluion: $\pm 0.1 dB$

For antenna/cable measurements, a short self-calibration procedure must be run prior to making the measurement. For more information about the calibration procedures and when they are needed, see sections 2 and 3 in the users manual or use the online help.

Options

cdmaOne/cdma2000 analyzer Option 200

Waveform quality (rho)

 $\pm .005$ for 0.9accuracy:

(min power @ RF input > -85 dBc)

Pilot time alignment (tau): $\pm 500 \text{ nSec}$

Code domain power

accuracy: \pm 1.5 dB absolute, \pm 0.5 dB relative (> -20 dB)

Pilot power: $\pm 1.5 dB$

RF channel scanner (includes adjacent channel power) Option 220

Measurement range: +20 to -125 dBm (up to +50 dBm with external

attenuator > 375 MHz, 10 KHz RBW)

Frequency readout accuracy: Time base accuracy +3 Hz + 1/(measurement

time X duty cycle)

Frequency range: 10 MHz to 2.7 GHz (usable to 500 KHz)

± 1 dB (100 to 2500 MHz) RF channel power:

Adjacent channel power

+ 0.75 dBc accuracy:

GSM TX analyzer Option 230

Measurement range: +20 to -125 dBm (up to +50 dBm with external

attenuator > 375 MHz, 10 KHz RBW)

Frequency readout accuracy: Timebase accuracy +3 Hz + 1/(measurement

time X duty cycle)

Frequency range: 10 MHz to 2.7 GHz (usable to 500 KHz)

RF channel power accuracy: ± 1 dB (100 to 2500 MHz) ± 1 degree RMS, ± 3 degrees peak Phase error:

W-CDMA (UMTS) TX analyzer Option 240

Error vector magnitude: Resolution 0.1

Conditions: Min power at RF input > -65 dBm, 3GPP test

model 4

Code domain power

accuracy: \pm 0.5 dB for code channel power > -25 dB

> relative to total power using test model 1 (with 16 DPCH, 32 DPCH, and 64 DPCH) test model 2, and test model 3 (with 16 DPCH an 32 DCPH)

Scrambling code: 1 second (in auto mode)

DC bias Option 300

Frequency range: 375 to 2500 MHz DC Voltage: +12.7 VDC max **DC Current:** 800 mA max Volt-Amps: 9 84 VA max

Signal generator (CW) Option 500 (port 1)

375 to 2500 MHz Frequency range: -23 to -90 dBm Output level: Level accuracy: $\pm 1 dB$

Phase error: at 30 KHz offset -90 dBc/Hz

cdmaOne/cdma2000 reverse link signal generator **Option 510 (port 1)**

Frequency range: 375 to 2500 MHz Output level: -28 to -95 dBm

Level accuracy: \pm 0.7 dB (at 25 °C, -44 dBm to -95 dBm) \pm 1 dB (at 25 °C, -28 dBm to -43 dBm)

Power meter Option 600

Display

-100 dBm to +100 dBm Range:

(range is power sensor dependent)

Display limits: ± 100 dBm (user settable)

Settable 1.0, 0.1, 0.01, 0.001 in logarithmic mode, Resolution: or 1, 2, 3, or 4 significant digits in linear mode

Accuracy

Instrumentation:

Absolute: \pm 0.02 dB (log) or \pm 0.5% (linear). Add the corresponding power sensor linearity percentage. Relative: \pm 0.04 dB (log) or \pm 1.0% (linear). Add the corresponding power sensor linearity percentage.

Zero set:

Zero set is the digital zero with an 8482A sensor: ± 50 nW

Power reference:

1.00 mW (0.0 dBm) traceable to the U.S. National Power output:

Institute of Standards and Technology (NIST).

Accuracy: \pm 1.2% worst case (\pm 0.9% rss) for one year.

SWR: < 1.08

External attenuator

Max power: 100 Watts $40 \text{ dB} \pm 0.5 \text{ dB}^{1}$ Attenuation:

Power meter Option 600 with Agilent 8482A power sensor (also supports Agilent 8481A power sensor)

Frequency range: 100 KHz to 4.2 GHz

VSWR:

100 KHz to 0.3 MHz < 1.60 0.3 MHz to 1 MHz < 1.20 1 MHz to 2 GHz < 1.10 2 GHz to 4.2 GHz < 1.3

 $+10 \text{ dBm to } +20 \text{ dBm; } \pm 3\%$ Power linearity:

Maximum power: 300 mW average, 1 W peak, 30 W-us per pulse

< 93.5 nW (0.85 + 110 nW) Measurement noise: Fixed at 32 in normal mode Averaging filter:

Zero drift: $< \pm 10 \text{ nW}$

^{1.} Attenuator can be characterized to within 0.1dB in the mobile phone bands using the insertion loss measurement. This value can be stored for use with the power meter.

T1 analyzer Option 700

Features:

Receive level: (Line 1 and line 2) +6 dB DSC to -36 DB DSX or

100 mv p-to-p to 12 v p-to-p

Receive frequency display receive frequency (5 ppm)(line 1 and line 2) "Loop-back" control send CSU or NIU loop codes CSU/NIU emulation

respond to CSU or NIU loop codes

Electrical interface

Connectors, RX, TX: Primary and secondary ports

Output: Conforms to TR-TSY-000499, CCITT Rec.G.703

AT&T Pubs CB113, CB119, CB132, CB143 PUB62508 and PUB62411 pulse shape

specifications when terminated in 100 ohms and $% \left(100\right) =100$

0 dB line build-out is selected

Line build-out: 0 dB, -7.5 dB, -15 dB

Input:

 Terminate:
 DSX +6 dB to DSX -36 dB, 100 ohms

 Monitor:
 DSX -14 dB to DSX -40 dB, 100 ohms

 Bridge:
 DSX +6 dB to DSX -36 dB, > 1000 ohms

 Clock:
 1.544 MHz

 Internal:
 ± 5 ppm

 External:
 ± 300 ppm

 Recovered:
 ± 300 ppm

Transmitter and receiver

Framing: Unframed, D3/D4 & ESF

Channel formats: Full T1, 64x1

Test patterns: QRSS, all Os, 1:7, 2 in 8, 3 in 24, all 1s,

T-1-Daly, 55 OCTET

Error injection

Type: BPV, frame, CRC, pattern (logic)

Error rate: Single

Alarm inject

Type: LOS, LOF, yellow, AIS, idle (CDI)

E1 analyzer Option 710

Features

Error detect: Code (BPV), FAS, MFAS,CRC-4, far end block

(FEBE), pattern, frame slip

Error rate calculation:

Alarm detect:

Clock and frame slips:

Auto configuration:

Bit-error-rate, error free seconds, errored seconds

AIS, TS-16 AIS, FAST DISTANT, MFAS DISTANT

Clock slips, frame slips, peak wander, clock slip rate

Automatically detect line code, framing and

test pattern

Receive level

(line 1 and line 2): +6 dB DSX to -36 dB DSX or 100 mv p-to-p

to 12 v p-to-p

Receive frequency (line1): Display receive frequency (± 5 ppm)

Channel access: output audio to system

Delay measurement: Measure delay in unit intervals for

"looped-back" signal

Electrical interface

Connectors, RX, TX: Primary and secondary ports
Output: Conforms to ITU-T Rec.G.703

Line code: AMI, HDB3

Impedance:

Terminate: 75 ohms \pm 5% bridge: > 1000 ohms

Input: Terminate: DSX +6 dB to DSX -36 dB

Warranty

Duration: one year

Ordering information – E7495B base station test set

Standard test set functionality includes spectrum analysis and antenna measurements

Standard accessories include:

- · PCMCIA 64 MB flash memory card
- · AC/DC converter
- · NI2040AG lithium ion battery
- · GPS antenna
- 10 dB Coaxial attenuator (Q2)
- · Coax 50 ohm terminated N-male
- · Open/short M type N
- · Adapter storage box
- · Shoulder strap
- · Documentation (CD ROM)A
- 2' M-N to M-N cables (Q2)
- 10' M-N to M-N cable
- · N-female to N-female barrel
- · Adapters

Agilent Technologies' Test and Measurement Support, Services, and Assistance

Agilent Technologies aims to maximize the value you receive, while minimizing your risk and problems. We strive to ensure that you get the test and measurement capabilities you paid for and obtain the support you need. Our extensive support resources and services can help you choose the right Agilent products for your applications and apply them successfully. Every instrument and system we sell has a global warranty. Support is available for at least five years beyond the production life of the product. Two concepts underlie Agilent's overall support policy: "Our Promise" and "Your Advantage."

Our Promis

Our Promise means your Agilent test and measurement equipment will meet its advertised performance and functionality. When you are choosing new equipment, we will help you with product information, including realistic performance specifications and practical recommendations from experienced test engineers. When you use Agilent equipment, we can verify that it works properly, help with product operation, and provide basic measurement assistance for the use of specified capabilities, at no extra cost upon request. Many self-help tools are available.

Your Advantage

Your Advantage means that Agilent offers a wide range of additional expert test and measurement services, which you can purchase according to your unique technical and business needs. Solve problems efficiently and gain a competitive edge by contracting with us for calibration, extra-cost upgrades, out-of-warranty repairs, and onsite education and training, as well as design, system integration, project management, and other professional engineering services. Experienced Agilent engineers and technicians worldwide can help you maximize your productivity, optimize the return on investment of your Agilent instruments and systems, and obtain dependable measurement accuracy for the life of those products.

Agilent T&M Software and Connectivity

Agilent's Test and Measurement software and connectivity products, solutions and developer network allows you to take time out of connecting your instruments to your computer with tools based on PC standards, so you can focus on your tasks, not on your connections. Visit www.agilent.com/find/connectivity for more information.
