

Agilent CSA Spectrum Analyzer N1996A

Exceptional performance...
anytime, anywhere

Frequency coverage

- Frequency range: 100 kHz to 3 or 6 GHz
- Signal source: 10 MHz to 3 or 6 GHz
- Preamplifier to 3 or 6 GHz

Performance

- DANL: -156 dBm/Hz, normalized to 1 Hz
- Best-in-class dynamic range with +18 dBm TOI
- Overall amplitude accuracy: ± 0.5 dB

Compact Design

- Weight: 7.5 kg with built-in signal source, preamplifier, and VSWR bridge
- Battery life: 2 hours (typical)

Features

- Brightest, highest resolution display in its class (21 cm XGA, 1024 x 768)
- 1 dB electronic step input attenuator
- 10 Hz to 5 MHz RBW standard, 10% adjustable to 200 kHz, 1 Hz to 50 MHz VBW
- USB and LAN standard

Traditional Agilent quality and reliability with
the performance you need, the convenience you want, and the price you can afford

Agilent Technologies

The Agilent CSA Spectrum Analyzer

A general purpose spectrum analyzer is the engineer's most flexible test tool. The Agilent CSA spectrum analyzer extends that flexibility with its performance, ease-of-use, and unprecedented reliability.

Performance and quality you expect at a price you can afford

The Agilent CSA spectrum analyzer brings a level of performance not seen previously in a compact spectrum analyzer. The highest dynamic range in its price class is achieved with unmatched distortion performance, substantial noise performance, and standard 10 Hz resolution bandwidth. The instrument also offers overall amplitude accuracy of ± 0.5 dB. Now you get all of this capability and more, with excellent reliability and low service and support costs.

Ease-of-use means greater efficiency

The user interface is designed to give expert users access to all of the power of the Agilent CSA. Logically grouped hard keys, soft keys, and menus allow intuitive control of parameters like input attenuation, bandwidth, and detector type. Features such as auto-tune, auto-scale, auto-range, 1 dB step attenuator, built-in preamp, and onboard help make the Agilent CSA easy to use even for non-experts.

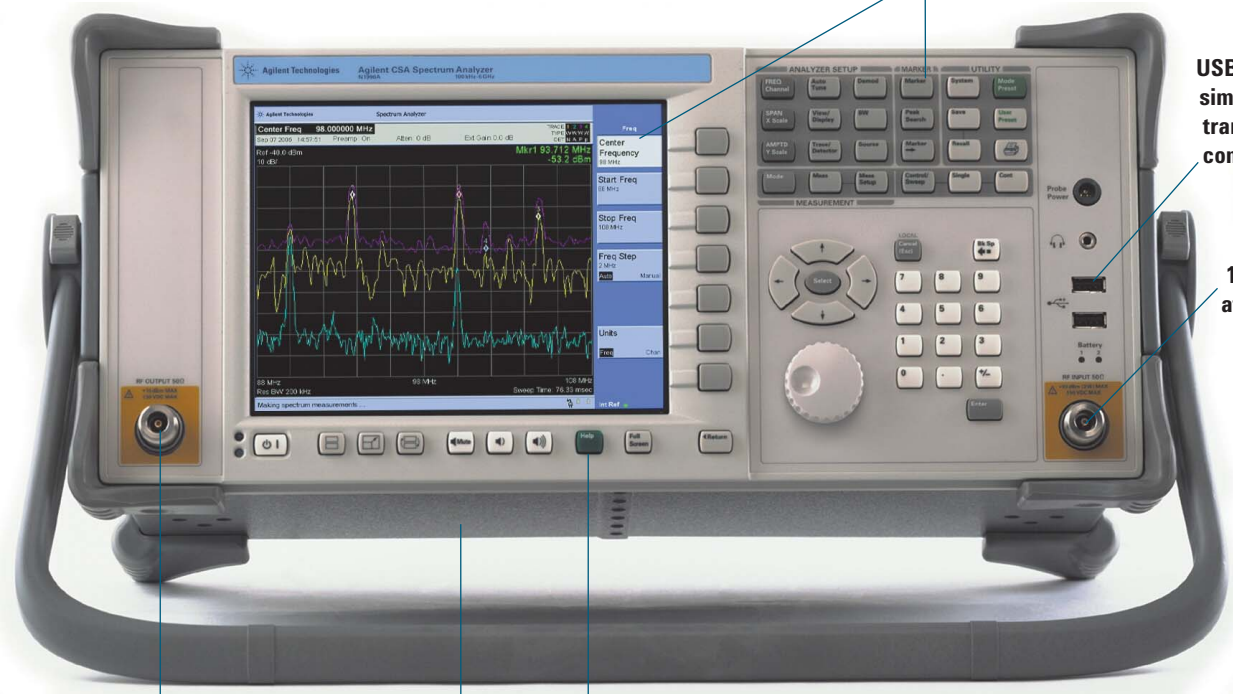

Light weight and portable at 8.5 kg with batteries

Bright, high resolution, 21.4 cm XGA display is excellent for outdoor use

Easy user interface speeds measurement process and reduces training time

USB 1.1 ports simplify data transfer and connectivity

1 dB step attenuator (best in class)

Signal source enables system, cable, and component measurements

Shallow depth of 25 cm (with bumpers) conserves bench space

Built-in help

VSWR bridge is built-in, reducing the complexity of stimulus/response measurements

Built-in preamplifier increases sensitivity

Traditional Agilent quality and reliability with the performance you need, the convenience you want, and the price you can afford...

Easy to upgrade

Unique among our products, each Agilent CSA spectrum analyzer comes with options installed, ready to be activated. This allows for easy upgrades, enabling users to reconfigure the instrument as needs change. Signal source and preamplifier upgrades may require service center calibration.

Connectivity is simple

Transport data to a PC easily via USB memory device. Download firmware upgrades from the Web into the instrument. Remotely control your instruments using SCPI commands over a 100 base-T LAN.

Accurate, Rugged, Dependable, and Flexible

The Agilent CSA is optimized for manufacturing with its combination of high performance, modern connectivity, and the industry's best reliability.

The instrument was designed for fast sweep speeds in narrow resolution bandwidths and fast in-channel measurements, as well as the highest achievable dynamic range in its price class. Remote control via 100 Base T LAN and SCPI reduce the complexity and time to develop automation software, enhance compatibility with existing systems, and reduce training time for manufacturing staff. All of these attributes are designed to reduce cost-of-test, while the excellent reliability assures the lowest overall cost of ownership.

Now you can afford the excellence of an Agilent spectrum analyzer at each engineer's bench!

You get true Agilent performance with TOI of +18 dBm, 10 Hz minimum RBW (1 Hz minimum VBW) with 10% adjustability, and 1 dB step attenuator. The large, bright, 21 cm, 1024 x 768 pixel, XGA display (best-in-class), convenient form factor, and straightforward portability of data with a USB memory device make the Agilent CSA spectrum analyzer easy to use. Features like auto-tune and auto-scale ensure that newer users can quickly make use of this extensive performance and capability.

The Agilent CSA's field-ready features make it an ideal choice for installation and maintenance of today's complex communication systems.

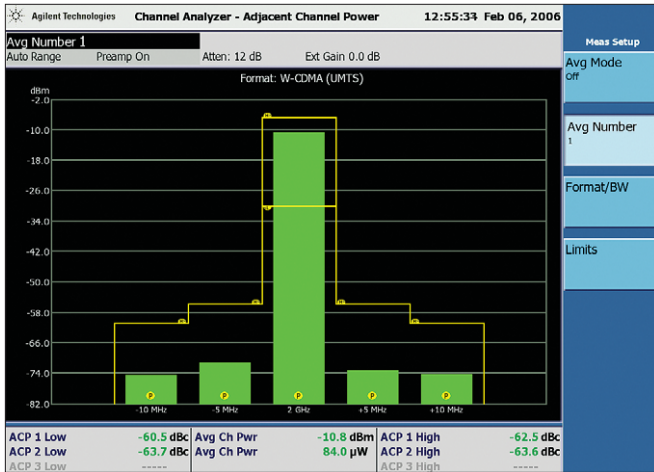

Weighing just 7.5 k (16.5 lbs) with rugged bumpers, and a comfortable, adjustable bail handle, the Agilent CSA spectrum analyzer is able to deliver powerful measurement capability where and when you need it. This analyzer has more than two hours of battery life and a bright, high-resolution display, perfect for use in the field. This instrument combines the functionality of a general-purpose spectrum analyzer, network analyzer, and power meter into a simple, easy-to-use package. The built-in VSWR bridge, optional internal signal source, and stimulus/response measurement suite confirm the Agilent CSA spectrum analyzer as the best installation and maintenance solution in its price class.

The Agilent CSA brings the power of spectrum analysis to the teaching lab, enabling professors to easily communicate signal theory to their students.

Easy transformation between time and frequency domains simplifies the understanding of digital modulation formats. Built-in help and auto-setup features bring full spectrum analysis capability into the hands of aspiring experts. With the shallow form factor conserving valuable lab bench space, exceptional performance, and affordable price, the Agilent CSA spectrum analyzer is a sensible addition to undergraduate and technical teaching lab stations.

Measurements and Features

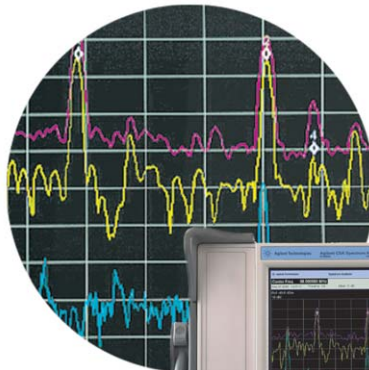

Communication channel measurements

The Agilent CSA spectrum analyzer includes a number of communication system channel measurements, allowing users to accurately assess the performance of common wireless telephony and other channel-based communication systems and components. Using preset format-based or custom parameters, the operator can easily determine distortion levels and channel power using the adjacent channel power function. Similarly, the occupied bandwidth function quickly determines power and bandwidth of signals with complex modulation.

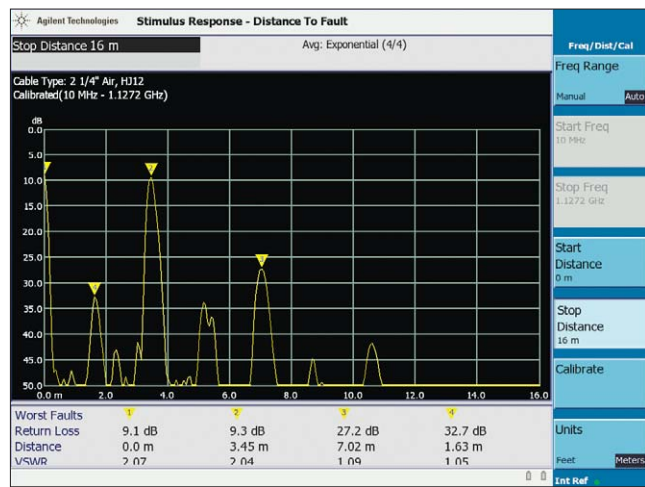

New general purpose features

The Agilent CSA offers a wide range of innovative features designed to assist non-expert users to easily set up and make valid measurements. The one button auto-tune function centers the largest signal on screen and reduces the frequency span, allowing the user to quickly zoom in. Auto-scale sets the reference level and amplitude scale for best signal viewing. Auto-range performs a full-band background sweep, optimizing input attenuation and preamplifier settings, ensuring that off-screen signals are not compressing the RF stage, assuring accurate measurement results.

Return loss, cable fault, and insertion loss capabilities

The Agilent CSA's built-in signal source and VSWR bridge enable a powerful range of scalar measurements not commonly found in general purpose spectrum analyzers. With the stimulus/response measurement suite, the Agilent CSA spectrum analyzer can characterize active and passive single and dual-port devices such as cables, filters, amplifiers, multiplexers, antennas, and switches. Measurements included are 1 and 2 port insertion loss, return loss, and distance-to-fault. The combination of robust capabilities and spectrum analysis tools can greatly simplify and accelerate installation and maintenance of complex components and systems.

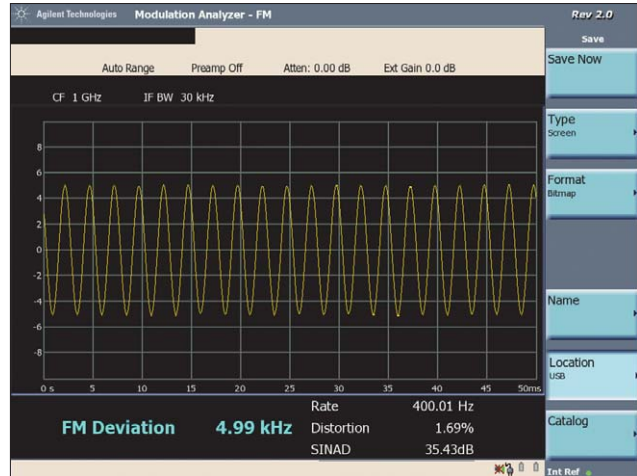

Use the spectrogram to analyze the stability of a signal over time, or to detect and identify signals interfering with the system of interest.

The spectrogram view is essentially a time capture of spectral activity that can be optimized to focus on an area of interest, detailing differences in the frequency and amplitude of spectral components as a function of time. A common use for spectrograms is in the identification and eradication of unwanted interference in communications systems. Spectrograms can also monitor the stability of a circuit or system over time, temperature, vibration, etc.

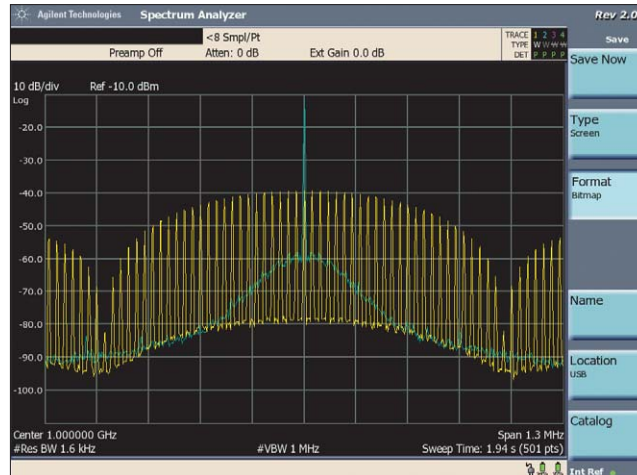

The Agilent CSA's optional modulation measurement suite provides functional and parametric analysis of AM and FM.

Whether you're making modulation depth or frequency deviation measurements for AM or FM devices, the Agilent CSA spectrum analyzer gives you the full range of metrics you need. The detailed measurement information – including deviation, modulation rate, distortion, SINAD, and carrier power – ensures a full understanding of the modulation characteristics. Both time domain and frequency domain views of the data allow you to analyze the signal quickly from different perspectives. The tune-and-listen option capability lets you hear the signal and classify it based on its audio qualities.

Analyze pulsed signals

The CSA clearly and easily displays pulsed signals in the frequency domain. You can measure the amplitude difference between a CW signal and a pulsed signal. The example to the right shows the Sinx/x of a pulsed signal along with the associated CW signal.

Stimulus/response calibration kit recommended to improve the accuracy of the stimulus/response measurement suite (N1996A-SRK)

Configuration requirement notes

The Agilent CSA spectrum analyzer includes documentation on a CD and an AC adapter.

1. The 3 GHz stimulus/response suite N8995A (Option SR3) requires a frequency range of 100 kHz to 3 GHz (Option 503).
2. The stimulus/response suite N8995A (Option SR6) requires a frequency range of 100 kHz to 6 GHz (Option 506).
3. The 3 GHz preamplifier (Option P03) is for use with the 100 kHz to 3 GHz frequency range (Option 503).
4. The 6 GHz preamplifier (Option P06) is for use with the 100 kHz to 6 GHz frequency range (Option 506).
5. The N1996A-HTC transit case is designed to be used with the N1996A-SCC soft carrying case.
6. N1996A-AFM AM/FM tune and listen is for both Option 503 and Option 506.
7. N8996A-1FP AM/FM Demodulation metric is for both Option 503 and Option 506.
