Introduction

The Agilent B2900A Series of Precision Source/Measure Units are compact and cost-effective bench-top Source/Measure Units (SMUs) with the capability to output and measure both voltage and current. An SMU combines the capabilities of a current source, a voltage source, a current meter and a voltage meter along with the capability to switch easily between these various functions into a single instrument. The Agilent B2900A series of SMUs provide best-in-class performance at a lower price than ever before. They have

broad voltage (210 V) and current (3 A DC and 10.5 A pulsed) sourcing capability, excellent precision (minimum 10 fA/100 nV sourcing and measuring resolution) and high measurement throughput. They also support an arbitrary waveform generation function. In addition, the Agilent B2900A series possess a superior graphical user interface with various viewing modes that dramatically improve test productivity, debug and characterization. The versatile integrated source and measurement capabilities of the Agilent B2900 series SMUs make them an ideal choice for testing

semiconductors, active/passive components and a variety of other devices and materials. The B2900 series has a broad application range that spans from R&D and education uses to industrial development, test and manufacturing. Moreover, they work equally well as either standalone or system components. The Agilent B2900A series consists of four models, the B2901A, B2902A, B2911A and B2912A, differentiated through their available features (number of digits displayed, measurement resolution, minimum timing interval, supported viewing modes, etc.) and by the number of SMU channels (one or two) they contain. This makes it easy to select the exact price/performance point to meet your testing needs.

Resistance Measurement

Resistance measurement can be performed under either auto or manual test conditions. Auto resistance measurement is performed in current source and voltage measurement mode. The total auto resistance measurement error is shown in the table below. The total error of a manual resistance measurement can be calculated using the voltage and current accuracy information as shown below.

Source I mode, manual ohm measurement (4-wire):

$$\text{Total error} = V_{\text{meas}}/I_{\text{src}} = R \text{ reading} \times (\text{gain error \% of V range} + \text{gain error \% of I range} + \text{offset error of I range} / I_{\text{src}} \text{ value \%}) + (\text{offset error of V range} / I_{\text{src}} \text{ value})$$

Source V mode, manual ohm measurement (4-wire):

$$\text{Total error} = V_{\text{src}}/I_{\text{meas}} = 1 / [1/R \text{ reading} \times (\text{gain error \% of I range} + \text{gain error \% of V range} + \text{offset error of V range} / V_{\text{src}} \text{ value \%}) + (\text{offset error of I range} / V_{\text{src}} \text{ value})]$$

Measurement speed = 1 PLC

Applicable for temperature: 23 °C ± 5 °C

Example of total error calculation:

I Source value = 1 mA at 1 mA range

V measure range = 2 V range

$$\text{Total error (\% reading + offset)} = (0.02 \% + 0.02 \% + 200 \text{ nA}/1 \text{ mA}) + (350 \mu\text{V}/1 \text{ mA}) = 0.06 \% + 0.35 \Omega$$

Conventional Command Set:

Supports industry standard conventional SCPI command set for basic compatibility

Program Memory

Program memory allows you to store long strings of SCPI command lines once into the B2900A series' volatile memory and then recall those strings multiple times while the program is executing using a single SCPI command. By storing the command strings in memory, the time that would have been spent sending those same commands over a communication bus is eliminated. For tests that utilize lots of repeated code (such as subroutines), program memory can dramatically reduce test times.

Max number of characters of program name:

32, with alphabets, numbers, hyphens and underscores.

Max memory size: 100 kB (2500 lines typical)

LXI

LXI Class-C compliant. The Agilent B2900A series follows specified LAN protocols and adhere to LXI requirements such as a built-in Web control server and IVI-COM driver.
